

Mobile i2K for Oracle eAM

Buzzi Unicem USA

PROFILE

Buzzi Unicem USA produces cement, ready-mix concrete and natural aggregates for concrete production. Buzzi is a **worldwide company** with a total capacity for producing more than 9 million tons of products. To distribute its products, Buzzi operates **30 distribution terminals** and a **fleet of river barges**.

CHALLENGE

Buzzi wanted to make the company's **work processes more efficient**. Buzzi needed to **reduce paperwork, execute inspections more efficiently** and **mobilize its workforce** so technicians could connect to their Oracle eAM regardless of location or network coverage

Buzzi needed the ability to:

- Conduct inspections at the asset level
- Review historical inspection data
- Manage collection plans
- Create service requests
- Solve connectivity issues
- Lower the total cost of ownership through improved worker productivity
- Ensure regulatory compliance
- Improve response and reporting times
- Improve accuracy of parts usage

SOLUTION

Using Ventureforth's Mobile i2K (Mi2K) for Oracle eAM, Buzzi was able to tackle its challenges. Buzzi replaced its paper-based processes and now executes work orders and inspections more efficiently and carefully. In addition, Buzzi technicians can connect to their Oracle eAM regardless of their location and network coverage to make better-informed decisions in the field.

Mi2K was installed out of the box in one business day at the Chattanooga, TN location. Ventureforth is currently rolling out the Mi2K solution at all Buzzi plants in North America.
